

TIPS OF THE MONTH!

Playing Tip: Navigator Alpha

Navigator Alpha tips feature 10 layers of Japanese pigskin leather that are bonded, then compressed for 3 minutes. This process results in a tip that mushrooms less and provides a firm and crisp hit. The base layers have a different density, allowing them to act like a bumper. This reduces pressure on the tip and helps protect the ferrule.

Jump/Break Tip: Tiger Jump/Break

We all know one of the key shots to winning is how you break. In addition to break, there are times in the game where you need just as much control for jump shots too. Jump shots are becoming one of the most important shots in today's game. Just making the jump shot is not enough, if you are serious about winning.

Tiger Laminated Jump Cue Tip is the difference between making the jump shot or making the jump shot with lot of control. Selected from quality cow & pig hide, this cue tip is made with the same quality as our other line of laminated cue tips. Vacuum laminated with VACULAM™ process, the bottom half is laminated for power and the top half for maximum control. Tiger Laminated Jump Cue Tips, when it really comes down to it all you have to do is just ELEVATE YOUR GAME!
